

## Press Release

### **Galileo Group AG exhibits during SAP TechEd'07 in Munich**

***Presentation of new version of Conigma™ CCM and brandnew product Conigma FlightRecorder.***

**Munich, October 11, 2007** - The Galileo Group AG, one of the leading providers of software solutions for application and transport management of SAP®, first time presents on SAP TechEd '07 from October 17-19 in Munich not only its recently released new version 3 of Conigma CCM, but also its brandnew product Conigma FlightRecorder to the public.

#### **Conigma CCM**

Conigma CCM allows customers to define and enforce standardized, unified, audit-proof and well-documented processes for incident-, change-, release- and configuration management of SAP solutions being used by developers, consultants and implementation partners. Conigma CCM also supports synchronizing development and operational processes independent of technologies used (ABAP™, JAVA) and manage transports of SAP data across an advanced system landscape with many instances of SAP applications in use. Powerful reporting functionalities help ensure a consistent view about the current status and progress of business requests, change orders, releases planned and many other aspects, helping to guarantee a complete and current overview of all activities within an SAP solution-based environment at any time.

#### **Conigma FlightRecorder**

Conigma™ FlightRecorder stores all SAP® relevant end user transactions in a temporary directory on the front-end PC. The program running in the background oversees, filters and categorizes the user actions being performed. Appropriate intervals for the creation of screenshots are ascertained automatically, on the basis of activity analysis during the SAP® session in use at the time, and they are evaluated according to relevance by means of a points system. These screenshots are automatically augmented by the Conigma™

Flight Recorder with valuable contextual information such as system fields. When the end user wishes to create a ticket for the IT help-desk, he chooses from the screenshots presented in the Snapshot Organizer of the Conigma™ Flight Recorders the screenshot sequence which was created by the program at the time the problem appeared. The SAP® end user can send these screenshots to the help-desk on a selective basis as a textual description of the problem.

### **About the Galileo Group**

The Galileo Group AG is one of the leading providers of Application and Transport Management solutions for use with SAP applications. The Conigma suite integrates administration and processes for seamlessly developing, adapting and customizing SAP solutions with existing IT support infrastructure, such as procedures for allocating software (ABAP™, TMS and Java CMS). This results in significant rationalization potential based on the more efficient, automated development and change processes. In addition, IT compliance initiatives are given optimal support by means of wide-ranging workflow functionalities and the detailed recording of all procedural steps.

The clients of Galileo Group include LSV (Landwirtschaftliche Sozialversicherung), Postbank, Siemens AG and Züricher Kantonalbank. Galileo Group AG may be found in the Internet under <http://www.galileo-group.de>.
